

The Maximum Subarray Problem

COMS10017 - Algorithms 1

Dr Christian Konrad

Divide and Conquer Algorithm:

Divide and Conquer Algorithm:

Let **A** be a divide and conquer algorithm with the following properties:

Divide and Conquer Algorithm:

Let **A** be a divide and conquer algorithm with the following properties:

- 1 **A** performs two recursive calls on input sizes at most $n/2$

Divide and Conquer Algorithm:

Let **A** be a divide and conquer algorithm with the following properties:

- 1 **A** performs two recursive calls on input sizes at most $n/2$
- 2 The combine operation in **A** takes $O(n)$ time

Divide and Conquer Algorithm:

Let **A** be a divide and conquer algorithm with the following properties:

- 1 **A** performs two recursive calls on input sizes at most $n/2$
- 2 The combine operation in **A** takes $O(n)$ time

Then:

Divide and Conquer Algorithm:

Let **A** be a divide and conquer algorithm with the following properties:

- 1 **A** performs two recursive calls on input sizes at most $n/2$
- 2 The combine operation in **A** takes $O(n)$ time

Then:

A has a runtime of $O(n \log n)$.

Maximum Subarray Problem

Buy Low, Sell High Problem

- **Input:** An array of n integers
- **Output:** Indices $0 \leq i < j \leq n - 1$ such that $A[j] - A[i]$ is maximized

Maximum Subarray Problem

Buy Low, Sell High Problem

- **Input:** An array of n integers
- **Output:** Indices $0 \leq i < j \leq n - 1$ such that $A[j] - A[i]$ is maximized

Maximum Subarray Problem

Focus on Array of Changes:

| Day | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 |
|----------|-----|-----|-----|-----|-----|-----|-----|-----|----|-----|----|-----|
| \$ | 100 | 113 | 110 | 85 | 105 | 102 | 86 | 63 | 81 | 101 | 94 | 106 |
| Δ | | 13 | -3 | -25 | 20 | -3 | -16 | -23 | 18 | 20 | -7 | 12 |

Maximum Subarray Problem

Focus on Array of Changes:

| Day | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 |
|----------|-----|-----|-----|-----|-----|-----|-----|-----|----|-----|----|-----|
| \$ | 100 | 113 | 110 | 85 | 105 | 102 | 86 | 63 | 81 | 101 | 94 | 106 |
| Δ | | 13 | -3 | -25 | 20 | -3 | -16 | -23 | 18 | 20 | -7 | 12 |

Maximum Subarray Problem

Focus on Array of Changes:

| Day | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 |
|----------|-----|-----|-----|-----|-----|-----|-----|-----|----|-----|----|-----|
| \$ | 100 | 113 | 110 | 85 | 105 | 102 | 86 | 63 | 81 | 101 | 94 | 106 |
| Δ | | 13 | -3 | -25 | 20 | -3 | -16 | -23 | 18 | 20 | -7 | 12 |

Maximum Subarray Problem

- **Input:** Array A of n numbers
- **Output:** Indices $0 \leq i \leq j \leq n - 1$ such that $\sum_{l=i}^j A[l]$ is maximum.

Maximum Subarray Problem

Focus on Array of Changes:

| Day | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 |
|----------|-----|-----|-----|-----|-----|-----|-----|-----|----|-----|----|-----|
| \$ | 100 | 113 | 110 | 85 | 105 | 102 | 86 | 63 | 81 | 101 | 94 | 106 |
| Δ | | 13 | -3 | -25 | 20 | -3 | -16 | -23 | 18 | 20 | -7 | 12 |

Maximum Subarray Problem

- **Input:** Array A of n numbers
- **Output:** Indices $0 \leq i \leq j \leq n - 1$ such that $\sum_{l=i}^j A[l]$ is maximum.

Trivial Solution: $O(n^3)$ runtime

Maximum Subarray Problem

Focus on Array of Changes:

| Day | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 |
|----------|-----|-----|-----|-----|-----|-----|-----|-----|----|-----|----|-----|
| \$ | 100 | 113 | 110 | 85 | 105 | 102 | 86 | 63 | 81 | 101 | 94 | 106 |
| Δ | | 13 | -3 | -25 | 20 | -3 | -16 | -23 | 18 | 20 | -7 | 12 |

Maximum Subarray Problem

- **Input:** Array A of n numbers
- **Output:** Indices $0 \leq i \leq j \leq n - 1$ such that $\sum_{l=i}^j A[l]$ is maximum.

Trivial Solution: $O(n^3)$ runtime

- Compute subarrays for every pair i, j

Maximum Subarray Problem

Focus on Array of Changes:

| Day | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 |
|----------|-----|-----|-----|-----|-----|-----|-----|-----|----|-----|----|-----|
| \$ | 100 | 113 | 110 | 85 | 105 | 102 | 86 | 63 | 81 | 101 | 94 | 106 |
| Δ | | 13 | -3 | -25 | 20 | -3 | -16 | -23 | 18 | 20 | -7 | 12 |

Maximum Subarray Problem

- **Input:** Array A of n numbers
- **Output:** Indices $0 \leq i \leq j \leq n - 1$ such that $\sum_{l=i}^j A[l]$ is maximum.

Trivial Solution: $O(n^3)$ runtime

- Compute subarrays for every pair i, j
- There are $O(n^2)$ pairs, computing the sum takes time $O(n)$.

Divide and Conquer Algorithm for Maximum Subarray

Divide and Conquer:

Divide and Conquer Algorithm for Maximum Subarray

Divide and Conquer:

Compute maximum subarrays in left and right halves of initial array

$$A = L \circ R$$

Divide and Conquer Algorithm for Maximum Subarray

Divide and Conquer:

Compute maximum subarrays in left and right halves of initial array

$$A = L \circ R$$

Combine:

Divide and Conquer Algorithm for Maximum Subarray

Divide and Conquer:

Compute maximum subarrays in left and right halves of initial array

$$A = L \circ R$$

Combine:

Given maximum subarrays in L and R , we need to compute maximum subarray in A

Divide and Conquer Algorithm for Maximum Subarray

Divide and Conquer:

Compute maximum subarrays in left and right halves of initial array

$$A = L \circ R$$

Combine:

Given maximum subarrays in L and R , we need to compute maximum subarray in A

Three cases:

Divide and Conquer Algorithm for Maximum Subarray

Divide and Conquer:

Compute maximum subarrays in left and right halves of initial array

$$A = L \circ R$$

Combine:

Given maximum subarrays in L and R , we need to compute maximum subarray in A

Three cases:

- 1 Maximum subarray is entirely included in L ✓

Divide and Conquer:

Compute maximum subarrays in left and right halves of initial array

$$A = L \circ R$$

Combine:

Given maximum subarrays in L and R , we need to compute maximum subarray in A

Three cases:

- 1 Maximum subarray is entirely included in L ✓
- 2 Maximum subarray is entirely included in R ✓

Divide and Conquer:

Compute maximum subarrays in left and right halves of initial array

$$A = L \circ R$$

Combine:

Given maximum subarrays in L and R , we need to compute maximum subarray in A

Three cases:

- 1 Maximum subarray is entirely included in L ✓
- 2 Maximum subarray is entirely included in R ✓
- 3 Maximum subarray crosses midpoint, i.e., i is included in L and j is included in R

Divide and Conquer Algorithm for Maximum Subarray

Maximum Subarray Crosses Midpoint:

Maximum Subarray Crosses Midpoint:

- Find maximum subarray $A[i, j]$ such that $i \leq \frac{n}{2}$ and $j > \frac{n}{2}$
(assume that n is even)

Maximum Subarray Crosses Midpoint:

- Find maximum subarray $A[i, j]$ such that $i \leq \frac{n}{2}$ and $j > \frac{n}{2}$ (assume that n is even)
- Observe that: $\sum_{l=i}^j A[l] = \sum_{l=i}^{\frac{n}{2}} A[l] + \sum_{l=\frac{n}{2}+1}^j A[l]$.

Maximum Subarray Crosses Midpoint:

- Find maximum subarray $A[i, j]$ such that $i \leq \frac{n}{2}$ and $j > \frac{n}{2}$ (assume that n is even)
- Observe that: $\sum_{l=i}^j A[l] = \sum_{l=i}^{\frac{n}{2}} A[l] + \sum_{l=\frac{n}{2}+1}^j A[l]$.

Two Independent Subproblems:

Maximum Subarray Crosses Midpoint:

- Find maximum subarray $A[i, j]$ such that $i \leq \frac{n}{2}$ and $j > \frac{n}{2}$ (assume that n is even)
- Observe that: $\sum_{l=i}^j A[l] = \sum_{l=i}^{\frac{n}{2}} A[l] + \sum_{l=\frac{n}{2}+1}^j A[l]$.

Two Independent Subproblems:

- Find index i such that $\sum_{l=i}^{\frac{n}{2}} A[l]$ is maximized

Maximum Subarray Crosses Midpoint:

- Find maximum subarray $A[i, j]$ such that $i \leq \frac{n}{2}$ and $j > \frac{n}{2}$ (assume that n is even)
- Observe that: $\sum_{l=i}^j A[l] = \sum_{l=i}^{\frac{n}{2}} A[l] + \sum_{l=\frac{n}{2}+1}^j A[l]$.

Two Independent Subproblems:

- Find index i such that $\sum_{l=i}^{\frac{n}{2}} A[l]$ is maximized
- Find index j such that $\sum_{l=\frac{n}{2}+1}^j A[l]$ is maximized

Maximum Subarray Crosses Midpoint:

- Find maximum subarray $A[i, j]$ such that $i \leq \frac{n}{2}$ and $j > \frac{n}{2}$ (assume that n is even)
- Observe that: $\sum_{l=i}^j A[l] = \sum_{l=i}^{\frac{n}{2}} A[l] + \sum_{l=\frac{n}{2}+1}^j A[l]$.

Two Independent Subproblems:

- Find index i such that $\sum_{l=i}^{\frac{n}{2}} A[l]$ is maximized
- Find index j such that $\sum_{l=\frac{n}{2}+1}^j A[l]$ is maximized

We can solve these subproblems in time $O(n)$. (how?)

Maximum Subarray Problem - Summary

Require: Array A of n numbers

if $n = 1$ **then**

return A

Recursively compute max. subarray S_1 in $A[0, \lfloor \frac{n}{2} \rfloor]$

Recursively compute max. subarray S_2 in $A[\lfloor \frac{n}{2} \rfloor + 1, n - 1]$

Compute maximum subarray S_3 that crosses midpoint

return Heaviest of the three subarrays S_1, S_2, S_3

Recursive Algorithm for the Maximum Subarray Problem

Maximum Subarray Problem - Summary

Require: Array A of n numbers

if $n = 1$ **then**

return A

Recursively compute max. subarray S_1 in $A[0, \lfloor \frac{n}{2} \rfloor]$

Recursively compute max. subarray S_2 in $A[\lfloor \frac{n}{2} \rfloor + 1, n - 1]$

Compute maximum subarray S_3 that crosses midpoint

return Heaviest of the three subarrays S_1, S_2, S_3

Recursive Algorithm for the Maximum Subarray Problem

Analysis:
